DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed June 18, 2008 are acknowledged.
2. Examiner acknowledges amended claims 1, 8 and 22.
3. Examiner acknowledges cancelled claims 4, 7, 11, 15, 18, 20, 21, 23 and 25.
4. The rejection of claims 1-3, 5-10, 12-14, 16-17, 19, 22, 24 and 26 under 35 U.S.C. 103(a) as being unpatentable over MacPherson et al., U.S. Pre Grant Publication 2005/0100658 is overcome by applicant's amendment.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
6. Claims 16 and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 16 and 19 are rendered indefinite because the claims are not commensurate in scope with claims 1 and 8 from which they depend. Claims 1 and 18 recite that the hole blocking layer is formed from anthracenyl compounds as listed in the claims. Claims 16 and 19 recite that the hole blocking layer is formed from BA1q, which is not an anthracenyl compound.

Art Unit: 1794

Allowable Subject Matter

7. Claims 1-3, 5-6, 8-10, 12-14, 17, 22, 24 and 26 are allowed. The prior art does not teach or suggest the recited organic electroluminescence device and method of fabricating an organic electroluminescence device comprising first and second electrodes formed on a substrate with an emission layer formed on the first electrode wherein the emission layer comprises a green first emission layer, a red second emission layer, a blue second emission layer wherein the green, red and blue emission layers are substantially coplanar; and a hole blocking layer formed over the green, red and blue emission layers wherein the hole blocking layer is substantially the same as the blue emission layer and is formed of any one of a plurality of substances listed in claims 1, 8 and 22. The closest prior art, MacPherson et al., 2005/0100658, fails to teach or suggest that the hole blocking layer and the blue emission layer are formed of substantially the same substance.

Response to Arguments

8. Applicant's arguments with respect to the present claims have been considered but are moot in view of the new ground(s) of rejection.

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 1794

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
